

API Response Packets

Customized chargeback responses uses merchant's data to analyze the correct reason code response needed to recover the the disputed presentment.

Direct Integration

Any entity looking to scale or reduce internal chargeback team costs can benefit from utilizing the direct API Solution.

Control every aspect of the Response using API endpoints. Add pages, remove pages create unique geolocation images, attach supporting documents can completed using <https://docs.chargebacks.online>.

AI Powered

The Merchant's availbe data is evaluated using the Credit Card brand reason code conditional rules.

Specific codes can be invalidated using advanced conditonal logic.

- AVS Y, CAVV, ECI 5, Dispute Date, Tracking Number
- AVS U, CAVV, ECI 7, Dispute Date, Tracking Number

Above are exmaples of conditional rules. These example would produce two different Resonse Packets. Visa rules allow Invalidation on chargebacks where AVS U. Invalidation are theoritically retracted from exception file

White Label

Give your internal team the tools to increase the chargeback response packets from minutes to seconds.

Reason Code Library gives the user why the chargeback was filed and how to respond. Custom API pages include the following.

Map of Cardholder Address

API generates image of the location of the was used to complete the transaction

Merchant Landing Page

API generates image of the Landing Page used on the completed transaction.

Social Network Profile

API generates social profile for further confirmation of cardholder identity.
